

Student Document Portal

Current capabilities, student happy path, and maintenance map
Prepared from the code in this workspace - 25 July 2026

6	33	22	40 MiB
admission phases	document items	student uploads	maximum per file

What the platform is

A student-only Streamlit portal for viewing admission progress, opening CAS forms and templates, uploading required files, and submitting validated files through the CAS API.

Deliberate scope

The interface offers sign in and forgot password only. It contains no registration, collaborator, or administrator workflow. The frontend holds no Dataverse or Microsoft Graph credentials.

The student happy path

1

Sign in

The student enters email and password, then uses Enter or the Sign in button. A temporary `admin / admin` path is available for testing.

2

Confirm the student record

Real login must return `user_type=student` and a student ID. Admission progress is loaded and the login email is matched to the student record.

3

Restore a secure session

The portal stores a signed HMAC session cookie for up to seven days and restores the sanitized student identity on a later visit.

4

Read the dashboard

The student sees their name, email, current phase, completed upload count, percentage, and the six phase cards. Real students advance sequentially.

5

Get the right document

Buttons open external forms, global templates, or student-specific files. A missing template or individual file is shown as a disabled download action.

6

Choose and validate files

Upload controls accept PDF, JPG, JPEG, or PNG up to 40 MiB. The portal checks extension, binary signature, PDF ending, and common active-content markers.

7

Submit and track

Validated files are held as pending, submitted in one phase action through the CAS API, then reflected as saved, pending review, approved, or replacement requested.

8

Sign out

Sign out clears the in-memory student and admission progress, expires the cookie, and prevents the just-cleared cookie from being restored on the rerun.

The six admission phases

The static contract is the offline fallback. When the API returns progress, the portal enriches phase status, display names, document IDs, file status, and template availability.

Phase	Document items defined in code	Student actions
1. Solicitud / aplicacion	Formulario en linea F1; Sobre mi; Entrevista; Formulario complementario F2	4 external links 0 uploads
2. Contrato	Contrato firmado; Condiciones generales / AGBs; Reglas del programa CAS; Factura CAS; Factura asesoria Anne; Confirmacion de admision	6 downloads 5 uploads
3. Documentos complementarios	Informe / recomendacion escolar; Certificado medico / de salud; Carne de vacunacion; Confirmacion de seguro en ingles; Carta a familia anfitriona; Collage de fotos; Video de presentacion; Invitacion al seminario	3 downloads 7 uploads
4. Documentos de visa	Partida de nacimiento con apostilla; Antecedentes penales con apostilla; Poder / autorizacion; Carta de presentacion; Formulario de visa; Escaneo de pasaporte; Escaneo del sello o adhesivo de visa; Foto tipo pasaporte	3 downloads 8 uploads
5. Familia anfitriona y escuela	Perfil de familia anfitriona y escuela	1 download 0 uploads
6. Ultimas indicaciones y vuelo	Ultimas indicaciones; Lista de equipaje; Manual CAS; E-ticket; Permiso de viaje para menores; Registro ELEFAND	6 downloads 2 uploads

How document actions behave

Download behavior	Upload behavior	Responsive behavior
External form: opens the configured URL. Global template: opens the API template route. Student-specific file: opens the document route when a document ID exists.	Prepare: validate and retain bytes, MIME type, phase, document type, and SHA-256. Submit: send multipart data to the student route; use the v1 fallback on HTTP 404. Refresh: request admission progress again after a successful response.	Below 700 px, columns stack, phase actions and buttons become full width, the top submit control stays sticky, and the compact CAS header remains visible. At wider mobile sizes, the identity mark is hidden and cards reflow vertically.

Status language shown to the student

Phase: Pending, Ready to submit, In review, Requires attention, Waiting for CAS, Completed, or Available. **File:** Ready to submit, Submitting, Saved to SharePoint through the CAS API, Pending review, Approved, or Replacement requested.

API routes used by the portal

Purpose	Client route
Student sign in	POST /auth/login
Forgot password	POST /auth/forgot-password
Admission progress	GET /students/{student_id}/admission-progress
Student upload	POST /students/{student_id}/documents/{document_type_id}/student-file
Upload fallback	POST /documents/upload
Student-specific download	GET /documents/{document_id}/download
Global template download	GET /document-templates/{document_type_id}/download?scope=global

Where to change each behavior

This map keeps future edits close to the function that owns the behavior. The code already separates page flow, session handling, process configuration, file validation, API transport, and responsive styling.

Change target	Primary code location	Functions / structures
App startup and routing	main.py	main
Sign in and password reset	app_pages/auth.py	_student_from_login _render_student_sign_in _render_forgot_password
Signed session and sign out	auth/session_cookie.py	restore_auth_session start_auth_session sign_out_current_user
Dashboard data load	app_pages/dashboard.py	_load_progress dashboard_page
Phase and document contract	config/process.py models/file_rule.py	DEFAULT_PHASES phases_from_progress FileRule
Progress and phase status	ui/process.py	phase_status progress_metrics render_progress_card
Downloads and upload controls	ui/process.py	render_phase_downloads render_document_uploader render_phase_submit
File acceptance and submission	validators/files.py document_storage.py	validate_file process_uploaded_file submit_uploaded_file prepare_document
CAS API routes and transport	api/cas_api.py	authenticate_student get_admission_progress upload_student_file download URL helpers
Responsive visual behavior	styles/app.py	inject_css
Windows-safe local launcher	scripts/run_streamlit.py scripts/run_streamlit.cmd	ensure_dependencies main

Current readiness and integration boundary

Implemented in the portal	Requires configured services
Student-only forms; Enter-to-submit; temporary test login; signed session restoration; six-phase UI; progress calculation; sequential unlocking; responsive controls; file validation; multipart request construction; download URL construction; status display.	Credential validation, password-reset delivery, Dataverse-backed student and progress data, SharePoint persistence, template availability, and student-specific downloads depend on the CAS API configured by CAS_API_BASE_URL.

Verification note

The repository test suite passed 13 tests on 25 July 2026. Coverage verifies the six-phase contract and document counts, progress enrichment, allowed file types, 40 MiB limit, binary signature checks, dangerous PDF markers, API route construction, and multipart upload content. The API calls are mocked in these tests; this is not evidence of a live Dataverse or SharePoint transaction.

Production note: The admin / admin test path is intentionally temporary. The code and README both state that it must be removed before production.
